Subject: contacts made during sampling

Jhana,

Sampling activities at our sites on Team 1 went normally.

I did note a catfish swimming downstream at the river sampling site next to the North Star Water Supply intake at the Animas River. The fish was about 10" long and appeared healthy.

Also, two contacts were made.

First, a farmer named Merejildo Martinez wanted to show me some crop damage to an alfalfa field due to lack of irrigation. I gave him a handout, with the 844 number, and recommended that he attend the Monday 6PM meeting in Farmington. He also suggested that we contact the local farmers, and that made me think of contacting the local Farm Bureau.

His contact info is:

Personal Phone/Ex. 6

Personal Address/Ex. 6

The next contact was at the river sampling site next tot the North Star Water Supply intake. This person had already talked with Mark McCasslan earlier in the morning. This person was Lloyd Ayliffe, General Manager of the North Star Water supply. He said that they have ~15 MG of water in their reservoir, which has a total capacity of 20 MG. He said that they plan to start pumping river water tomorrow. He also said that they have about 1200 water connections, running between Aztec up to the Colorado border. His phone no. is **Personal Phone/Ex. 6**

That is it for now.

Juan
